London, United Kingdom

Principal Software Engineer and CI/CD Team Lead @ DevEx Group (Vice-President) @ JPMorganChase

Guiding principles

Communication

I foster collaboration through the use of common language, actively challenge assumptions, maintain high situational awareness, and practice open communication.

Development

I've refined a development approach that prioritizes user needs, eliminates bias and redundancy, employs contextually appropriate methods and tools including agile practices, focuses on value-based outcomes rather than contractual obligations, applies standards when appropriate, and delivers solutions characterized by speed, cost-effectiveness, restraint, and elegance (FIRE).

Leadership

I excel by executing quickly rather than waiting for perfection, embracing strategy as an iterative process, taking full ownership, thinking ambitiously to inspire others, navigating complexity with confidence, remaining committed to direction while adapting the path, leading with humility, exploiting the surrounding landscape, and recognizing the transient nature of all systems.

Learning

I cultivate growth through systematic data-informed learning, practical application, curiosity-driven risk-taking, and attentive ecosystem monitoring for future opportunities.

Operations

I drive operational excellence by focusing on granular details, implementing robust failure management strategies, challenging organizational inertia, prioritizing effectiveness over efficiency, optimizing workflow by eliminating bottlenecks, fostering continual improvement with fewer resources, and establishing exceptional standards that exceed industry expectations.

Structure

I advocate for small, empowered teams with distributed decision-making, focusing on aptitude and attitude while providing purpose, mastery, and autonomy to diverse team cultures (pioneers, settlers, town planners) designed for constant evolution.

Notable Initiatives

Wardley Maps

Topographical intelligence in business.

- Practitioner of [Wardley Maps](#)
- Attendee at multiple [Map Camp](#) events.

Cynefin Framework

A Leader's Framework for Decision Making and Action.

Completed [Cynefin](#) online courses:

- Cynefin 101 - Getting started
- Cynefin 102 - Models & Decision Making
- Cynefin 110 - Domain models (3x3s)

Domain Driven Design

Approach to software development that centers the development on programming a domain model that has a rich understanding of the processes and rules of a domain.

Attendee at multiple Domain-Driven Design physical/online conferences.

Completed the following courses:

- 3 day Course, [Event Storming](#) Master Class with Alberto Brandolini.
- 5 day Course, Domain Models in Practice: DDD, CQRS & Event Sourcing with Marco Heimeshoff.

Leadership Training @ JPMorganChase

Completed a total of 10 days of in person Leadership and Management courses covering:

- Building a Team: *Professional and Management capabilities, Conflict management*
- Empowering a Team: *Delegation, Change, Stress, Energy, Resilience*
- Diversity Equity and Inclusion: *Trust, Behaviours and Micro Aggressions*
- Guiding Careers: *Hiring, Career conversations*
- Driving Performance: *Goal setting, Competence and Commitment, Leadership Styles*
- Coaching: *GROW model, Trust, Listening, Questioning*
- Feedback: *CAR/AR model*

CICD and DevEx @ JPMorganChase

Responsible for transforming the developer experience at Chase UK's mobile banking platform, which serves millions of customers across the United Kingdom. Developed and executed a strategic Wardley Maps approach to modernize DevEx through three interconnected pillars: comprehensive documentation systems with templates and guides; an advanced CLI tool automating developer tasks while enforcing best practices and compliance; and vibrant community engagement initiatives including guilds and collaborative forums. Spearheaded the large-scale migration of 500+ microservices from legacy systems (Spinnaker, Bitbucket, Jenkins) to modern platforms (Harness, GitHub, GitHub Actions), successfully transitioning 600+ engineers while maintaining strict adherence to risk and control policies, and effectively commoditizing our continuous integration and delivery capabilities.

Global Platform Project @ Condé Nast

Responsible for technical leadership of a comprehensive platform modernization project serving iconic media brands including Vogue, GQ, Wired, and The New Yorker, processing millions of daily requests across more than 20 tenants. I designed robust multi-tenant architecture utilizing Terraform for infrastructure as code, Helm for Kubernetes application deployment, Docker for containerization, and integrated observability solutions for monitoring and troubleshooting. Key achievements include developing a CLI tool that modernizes legacy applications and deploys to production within an hour, creating practical engineering Labs promoting best practices, establishing GitHub Actions workflows for CI/CD automation, designing migration pathways for teams transitioning from legacy systems, and regularly presenting platform innovations to drive adoption and collect valuable feedback.

Services, UI and DNS migration to AWS @ eFinancialCareers

Successful zero-downtime migration all our stacks to AWS, by building a template micro service stack that ran Docker applications on EC2 using Terraform. All micro services now follow a standard Infrastructure Stack including Route53, WAF, ELBs/ALBs, CloudFront, Nginx, Docker, ASG/EC2, CloudWatch Metrics Alarms and Dashboards and Splunk logging. All micro services have a Pipeline (CodePipeline) complete with Github and Jenkins integration, that build, deploy and test each service. All micro services have a Runbook for On Call support.

Experience

JPMorganChase

Full-time • 2yrs 6mos • London, United Kingdom

Roles

- CICD Team Lead @ DevEx Group (Vice-President)
 - *Apr 2023 - Feb 2025 • 1yr 11mos*
- Principal Software Engineer @ DevEx Team (Vice-President)
 - *Sep 2022 - Mar 2023 • 7mos*

Responsibilities

Strategy

Led cross-functional Wardley mapping workshops to identify value chains and capability maturity, partner with product teams and leadership to translate business objectives into prioritized technical initiatives, allocate engineering resources strategically, and articulate our technology roadmap to external stakeholders.

Planning

Interfaced with Product Managers to develop Epics and Stories, set up Jira roadmaps, drive quarterly Program Increment Planning, coordinate cross-team activities with stakeholders, facilitate retrospectives and strategy prioritization, assign engineers to epics, collaborate daily with Architecture, Security, and Governance teams, make complex technical trade-offs to achieve consensus, articulate end-to-end domain decisions, and keep stakeholders informed through various communication channels.

Operations

Architected and implemented end-to-end incident management operations, encompassing post-mortem processes, structured issue intake pipelines, detailed Playbooks and Runbooks, proactive observability alerts, and systematic issue tracking and closure methodologies that significantly enhanced system reliability for our services.

Team Management

Successfully merged and led a cross-timezone CICD team of 8 engineers, overseeing daily operations, vendor management, and governance while establishing engineering best practices, conducting knowledge sharing sessions, and maintaining clear communication channels with leadership through regular townhalls and demos.

People management

Managed 5 direct reports across 2 time zones, responsible for full employee lifecycle management (hiring, onboarding, offboarding), conducting regular 1:1s, overseeing attendance and leave, driving recruitment processes, handling HR matters, providing performance reviews, and fostering team development through coaching, feedback, and leadership training with focus on diversity, equity and inclusion.

Developer Experience (DevEx)

Pioneered the development and execution of a three-pillar Developer Experience strategy encompassing documentation, a feature-rich CLI tool for automation, and community engagement initiatives, while architecting a tenanted CICD system, delivering proofs of concept, and establishing effective collaboration with controls teams for compliance and governance.

Continuous Delivery (CD)

Led the enterprise-wide migration from legacy Spinnaker to Harness for Continuous Delivery, designing a secure distributed worker architecture on AWS ECS Fargate Clusters that integrated seamlessly with existing infrastructure (proxy, Jfrog, Jenkins, AWS EKS, Terraform), implementing compliance controls and distributed caching to improve security posture, managing the vendor, and successfully balancing technical excellence with delivery timelines for 500+ engineers.

Continuous Integration (CI)

Spearheaded comprehensive DevOps operations and strategic improvements across the technology stack, including CI pipelines (Jenkins Cloudbees), source code management (Bitbucket), artifact storage (Jfrog Artifactory), code quality (SonarQube), and Infrastructure as Code (Terraform Enterprise), while architecting a complex migration to GitHub and GitHub Actions with meticulous planning, risk control, and identity provider integration.

Condé Nast

Full-time • 3yrs 9mos • London, United Kingdom

Roles

- Principal Engineer @ Cloud Platform Team
 - Jan 2022 - Aug 2022 • 8mos
- Senior Software Engineer @ Cloud Platform Team
 - Dec 2018 - Dec 2020 • 3yrs 1mo

Responsibilities

Team

Cross-timezone, diverse remote Agile team, I support 200+ engineers across 11 markets by maintaining multi-region AWS environments, global Kubernetes clusters, and custom Golang/NodeJS tooling while participating in incident management and on-call rotations.

We lead, educate, advocate the principles and practices of DevOps across all of Condé Nast, Build tools, provide services and help teams to efficiently own the life-cycle of their applications, Consulting with teams through pairing to facilitate optimal use of the platform.

Planning

Drove planning sessions following the Story mapping framework and DDD principles. Projects included building Global Kubernetes Clusters and Running our entire tech stack in China.

Consulting

Education and Onboarding of Engineers into our Cloud Platform, ran Clinics and Pairing/Troubleshooting sessions with Engineers. Surveyed the Engineering Organization on DevOps Maturity to understand the main gaps across Condé Nast Engineering in order to address them. Responsible for demos, announcements and general platform updates to the wider Engineering Organization.

Recruitment

Interviewed dozens of candidates over the entire recruitment lifecycle, across multiple levels (Junior/Intermediate/Senior Software Engineers), both permanent and contract, for teams across the organization. The interviews cover the candidate's situation and motivation, experience and technical ability as well as their attitude and approach to work.

DNS and Edge Services

Owner of CDN (Fastly), responsible for TLS Certificates management, IaC Best practices (Terraform), and Engineer access. Owner of DNS root zones domain registration, responsible for zone delegation and IaC

Best practices (Terraform).

AWS account Provisioning and Cloud Governance

Responsible for Orchestrated (CircleCI Pipelines) AWS account Provisioning via Terraform (Infrastructure as Code), owner of Best Practices and distribution of Terraform Modules for all Engineering. Designed and built the Audit log system. Owner of resource Tagging best practices as well as cost saving and security integrations.

Access Management

Management of Engineer access via Okta SSO Integration, Github, VPN, Pritunl Zero (Beyond Corp Proxy) and secure secret storage via 1Password and Keybase. Owners of the Joiners/Movers/Leavers process for several of the services we provide.

AWS Network

Project Lead in the Networking layer for our Global Platform (AWS EKS based), responsible for defining requirements, testing and coordinating teams in order to deliver a networking solution that supports both the build out of new AWS EKS Clusters as well as the migration of our main properties (Vogue, GQ, Wired, etc.) in a staggered manner, allowing teams to move applications at their own pace.

Continuous Integration / Continuous Delivery (CI/CD)

Owner of helm charts used by Engineers to deploy to Kubernetes as well as best practices like rollback strategies. Owner of custom docker images and docker image repository (Quay.io) distribution, security scan, access and availability. Owner of CircleCI Enterprise and SaaS, responsible for SLOs, upgrades and secret management.

CircleCI

Serves 150+ engineers around the world. Designed and built the supporting infrastructure with IaC, including DNS, Load balancing, Scaling, Zero Trust Authentication and Backup systems. Responsible for maintenance and monitoring (SLOs), configuration, upgrades and engineer experience.

DHI Group, Inc.

Full-time • 3yrs 3mos • London, United Kingdom

Role

- Senior Software Engineer @ Cloud Platform Engineering Team
 - Jan 2018 - Dec 2018 • 1yr

Responsibilities

I joined a distributed team spanning UK and US time zones to establish engineering standards and solutions for logging, monitoring, permissions management, and deployment pipelines. I developed a custom Python-based CloudFormation CLI tool that revolutionized our testing workflow by enabling rapid deployment of nested stacks while maintaining organizational governance through enforced naming and tagging policies. I created extensive technical documentation including architecture diagrams, guidelines, and best practices that served as reference materials across the organization. My CloudFormation template contributions addressed numerous infrastructure challenges, including secure secret management through Parameter Store and Lambda resources, Lambda log forwarding to Splunk, Lambda metric collection for InfluxDB, and a secure artifact repository built on S3 with KMS encryption. I enhanced our development workflows by implementing various CodeBuild templates with different integration points, including a GitHub WebHook solution that automated testing for pull requests. I conducted technical evaluation of ECS Fargate as part of a cross-organizational assessment comparing containerized and serverless architectures. Throughout my

role, I maintained focus on creating reusable CloudFormation templates that solved common organizational problems while improving security, observability, and developer experience.

Role

- Senior Software Engineer @ eFinancialCareers Team
 - Jan 2017 - Dec 2017 • 1yr

Responsibilities

I led critical infrastructure initiatives including the successful migration of our entire technology stack to AWS and the transition of all eFinancialCareers DNS records to Route53. I designed comprehensive infrastructure solutions incorporating both EC2 virtual machines and AWS Lambda serverless architectures. Using Terraform and AWS services (CodePipeline, S3, CloudFront, WAF, Jenkins), I implemented the infrastructure, tooling, and delivery systems for our Login ReactJS Web Components. My pipeline standardization work resulted in over 50 deployment pipelines, with 15 achieving full automation from GitHub to Production with comprehensive testing coverage. I developed several Lambda-based systems to manage deployment windows, email notifications, and JIRA ticket automation, facilitating our transition to Continuous Delivery practices. Beyond technical contributions, I regularly collaborated with development, marketing, and product teams, mentored new engineers in AWS technologies and team workflows, redesigned the engineering onboarding process to include clear documentation and mentorship, participated in technical interviews across multiple skill levels and technologies, and built a rapidly deployable Jenkins and Selenium environment on EC2 infrastructure.

Role

- Javascript Developer @ eFinancialCareers Team
 - Oct 2015 - Dec 2016 • 1yr 3mos

Responsibilities

I was responsible for the evolution and maintenance of our AngularJS-based WebStore platform serving millions of daily users. I implemented comprehensive analytics solutions and A/B testing frameworks that provided data-driven insights for product decisions. My work extended to developing business-critical features while ensuring quality through Protractor-based End-to-End testing. Recognizing opportunities for workflow improvements, I enhanced our development process by integrating Gulp and NPM build tools, which reduced build times. I took the initiative to lead a team-wide git workflow reformation, simplifying our branching strategy and optimizing the Pull Request process. To address environment consistency challenges, I architected multiple Vagrant-based development environments that not only accelerated new developer onboarding but also supported our team through a complex Windows to Mac transition.

Lead Galaxy

Full-time • 1yr 1 mo • London, United Kingdom

Role

- Full Stack Web Developer
 - Oct 2014 - Oct 2015 • 1yr 3mos

Responsibilities

As Full Stack Developer I worked in diverse types of projects including: Landing pages, Newsletter design, code and optimization, Wordpress setup, customization and speed optimization, Bespoke websites design, code and speed optimization, Website analytics and Conversion tracking (Google, Facebook, Twitter and Bing), Admin Platform (AngularJS), Database design (SQL), API design, implementation and documentation

(PHP, Node.js and ASP .NET), In- house automation tools (Node.js), Systems troubleshoot (Website, Email, Analytics and Conversion Tracking), Documented Workflow and Website tools, Brand design (logos, digital ads), Print design (business cards, stands, badges and magazine ads).

Vitamin London

Full-time • 11 mos • London, United Kingdom

Role

- Front & Middle-End Web Developer
 - Nov 2013 - Sep 2014 • 11 mos

Responsibilities

I worked in a small team, and very closely with the Digital Designer and the Back-End Developer to bring the best possible product to the client. Smaller projects include Shopify and Wordpress setup, customization and plugins. Medium sized projects include website redesign, fully responsive websites and micro-websites. And bigger projects consist of custom-made web platforms with full- blown API's, desktop client apps and mobile client apps. In addition to client projects I develop in- house web tools and frameworks, like a photo cropping tools, image sliders, image pre-loaders and javascript UI kits. Testing is also a big part of my process, and I use various local and remote tools to test in different browsers and devices making sure every product is fully operational and performs efficiently.

Self-Employed

Part-time • 3yrs • Lisbon, Portugal

Role

- Freelance Web Developer
 - 2011 - 2013 • 3yrs

Responsibilities

Worked on various improvements and new features in existing websites in the hospitality industry using HTML, CSS, Javascript, PHP and MySQL.

Education

University of Lisbon (UL) - Faculty of Fine Arts Lisbon (FBAUL)

2012 - 2013 • Lisbon, Portugal

MA in Equipment Design (6 Units). Units completed successfully and with an overall average of 15 points (out of 20).

Laureate International Universities - Universidade Europeia

2009 - 2012 • Lisbon, Portugal

BA Hons in Information Systems, Web and Multimedia. Degree Completed with an overall average of 15 points (out of 20).
